

ABSTRACT

Now a days water is the major problem we are facing. We usually buy water and fill it in our tank for uses. But in urgent times we can't get water immediately, it would take 2 or 3 days. Since we don't know more suppliers we are depending on one or two suppliers. We face similar problem in buying drinking water cans, we only know the nearby shop owners number, we usually depend on them they would come at his will, so we need to wait for him. We can overcome this problem by creating an app which shows nearby shops which delivers water cans. We can allow user to buy water cans using the app, like zomato, swiggy we can track them. We can also add groceries and vegetables along with water cans. People feel lazy to go to shops to buy vegetables and groceries they need. This app would allow to buy them from their home. Then we can also add water suppliers, list the number of suppliers near by them and the time at which they can reach them.
